ARIE Self-Host Settings

If you are hosting PinPoint on your server, ARIE will need to be running at all times in order for the system to create viewable images, collect OCR text from documents, and perform several other tasks such as split/merge documents, variable naming, and loading folders from a spreadsheet.

ARIE runs as a Windows application and is installed by default to C:\Program Files (x86)\LSSP\ARIE Win.

The settings file for ARIE is ARIE Document.txt.

The format of the document is as follows:

- Data base connection: [your server connection];PinPointMain;Lssp2012;lssp;1;100;20
- Time Interval (Seconds): 25
- DBX: [any fileroom databases to exclude]
- Batch: [your path, local or network location]\Batch
- Multiple: [your path, local or network location]\Multiple
- Native: [your path, local or network location]\Native
- Single: [your path, local or network location]\Single
- Folder: [your path, local or network location]\Folder
- Logo: [your path, local or network location]\CoverLogo
- Split: C:\Program Files (x86)\Lssp\ARIE WIN\pdfpg-full.exe
