Menu > Admin > Setup > Languages

Administrators can create designated languages and select the language that a specific user speaks when you create their user profile.

Keep in mind, this will not change the language used in PinPoint, it is only a label for a user's profile.

1. Similar to the **department master screen**, type the language in the "Language" field, then click "Save".
2. Once finished adding your languages, you can exit or move to the user setup screen and assign your languages.
